

COGNIZANT GCP HIRING - HACKATHON EVALUATION - GUIDELINES

Hackathon Evaluation Structure

Activity	Time
Team Introduction & Problem Statement – Team Leader	3 min
8 Students – Integrated* Presentation (PPT) + MVP Demonstration	27 min
Technical Q&A / Cross-questioning	20 min
Evaluator Scoring & Final Remarks	5 min
Buffer / Transition / Technical Setup	5 min
Total	60 min

*continuous flow from one section to the next section

Student wise presentation structure

Student	Presentation – PPT	MVP Demonstration	Approx. Time
S1 – Solution Lead	Problem → Target Users → Proposed Solution → Overall Workflow	Launch the application → show entry/home screen → initiate the primary user journey → hand over to S2	2–3 min
S2 – Frontend / UI	UI design → Screens → Navigation → User interaction	Demonstrate the main screens, forms, navigation, filters/buttons and primary user interaction	2–3 min
S3 – Backend / API	Backend technology → API flow → Business logic	Demonstrate a user action that invokes the backend → show processing/result; explain relevant API/business logic	2–3 min
S4 – Database / Data	Database → Tables/Entities → Data flow → Data management	Demonstrate data being created → stored → retrieved/updated in the application	2–3 min
S5 – GCP / Cloud Architecture	Architecture diagram → GCP services → Why selected → Cloud implementation	Demonstrate the deployed application on GCP and, where appropriate, the relevant GCP services/console	3–4 min
S6 – Linux / Networking / Deployment	Linux VM → Network flow → Deployment → Security/ports	Demonstrate the Linux VM/deployment environment; show relevant configuration or running services where useful	2–3 min

Student	Presentation – PPT	MVP Demonstration	Approx. Time
S7 – AI / GenAI / Innovation	AI/GenAI use → Purpose → Technology/model → Input–processing–output → Limitations	Live demonstration of the AI feature , if implemented; otherwise demonstrate the team's meaningful innovation/advanced feature	2–3 min
S8 – Testing / Integration / Impact	Testing → Edge cases → Results → Impact → Future scope	Demonstrate one important edge case/error scenario , show the result, and briefly establish that all components work together	2–3 min
